

EPIC-CURE EMULSION - PROCLAIM™ EC

Exclusively from ULANO

PROCLAIM™ EC

First in a new line of EPIC-Cure emulsions featuring revolutionary

RD SENSITIZING TECHNOLOGY

Eliminates the need for diazo; fast, easy-to-use and safe!

- **Breakthrough technology:** *RD Sensitizing Technology* functions with our familiar diazo-sensitized and diazo-dual cure emulsions—without the need for diazo!
- **Ready-to-use:** Pre-mixed, Proclaim EC eliminates the mixing and measuring involved in using conventional diazo-sensitized emulsions, thereby lessening the possibility of errors.
- **Speeds stencil production time:** Conventional diazo-sensitized emulsions require stencil makers to dissolve the diazo in water, wait for the release of trapped air, stir the diazo solution into the emulsion, then wait for the emulsion to de-bubble. Proclaim EC is pre-mixed and pre-sensitized. No measuring, no mixing, no waiting.
- **Resistant to heat and humidity:** Proclaim EC and the other forthcoming EPIC-Cure emulsions are much less affected by ambient conditions than conventional diazo emulsions. Conventional diazo reacts to heat and humidity, resulting in slower exposures and accelerated aging. Moreover, diazo tends to clump, risking pinholes and incomplete sensitization.
- **Environmentally safe:** Diazo is an airborne irritant. Proclaim EC and the other EPIC-Cure Line of emulsions do not utilize diazo, diazo bottles, or stirrers.
- **Longer shelf and pot life:** EPIC-Cure emulsions offer substantially longer (18 months) shelf and pot life compared to conventional diazo-sensitized emulsions (6 weeks).

To learn more about Proclaim EC and ULANO's EPIC-Cure line of emulsions featuring RD Sensitizing Technology, visit www.ulano.com or contact your local technical sales manager.

ULANO CORPORATION is recognized as a world-class leader in the screen printing and graphics arts industry.
