

# CAPILLARY FILM FOR IMPRINTED SPORTSWEAR

ADVANCED STENCIL TECHNOLOGY

## EZ-FILM™

**Why Mess with Direct Emulsion?  
Let Us Coat Your Screens—with EZ-FILM!**

Breakthrough pricing makes **EZ-FILM** the first viable alternative to direct emulsion for imprinted sportswear printing. Like all capillary films, **EZ-FILM** offers significant savings in labor and production time over emulsion, so for the same overall cost of coating a screen—or less!—shops can upgrade to the convenience of film. **EZ-FILM** makes it... *easy* to produce perfect stencils quickly, consistently, and with no mess or waste. With our factory-controlled emulsion thickness, **EZ-FILM**'s exposure time is always the same, and (with the same mesh count) so are stencil thickness and ink deposit. **EZ-FILM** is ideal for mesh counts of 110 - 156 threads per inch ( $\approx 43 - \approx 61/\text{cm.}$ ), using standard solvent-based textile inks and mild washup solvents.

### FEATURES

Super-fast processing

Easy to use

"Pre-coated" emulsion

Wet processing

Prepackaged sheets

Transparent magenta color

### BENEFITS

Fast exposing

Dries faster than direct emulsion

Fast stencil turnaround

Minimal training needed

Perfect stencils—every time

Half the production time of direct emulsion

Consistent stencil thickness

Control of ink deposit--and ink costs

Consistent exposure time

Fewer pinholes

Single drying time speeds production

Convenient

No mess, no waste

Easy inspection and registration

**EZ-FILM** pre-cut sheets are 15" X 17" ( $\approx 38 \text{ X } 43 \text{ cm}$ ) and 17" X 24" ( $\approx 43 \text{ X } 60.9 \text{ cm}$ ), packaged 50 per box (2 X 25)
