

Ghost Remover Activator

A water emulsifiable solvent-based activator. In combination with Ghost Remover it is especially suitable for removal of ghost images and ink residues.

Ghost Remover Activator is a very user-friendly product with a high flash point, very mild odor, and a viscosity that makes the product easy to use. It is very economical and usable on a wide variety of mesh counts, including very coarse.

Ghost Remover Activator is free from aliphatic and aromatic hydrocarbons. Entrapped solvents can be eliminated in adapted biological sewage plants.

INSTRUCTIONS:

- Remove inks completely with the proper solvent. Reclaim the stencil with Stencil Remover Liquid No. 4 or Stencil Remover Paste No. 5
- Rinse thoroughly. Dry the screen.
- Apply Ghost Remover to both sides of the screen. A scoop coater or a brush can be used. Dispose of any excess Ghost Remover left in the coating trough; do not pour it back into the container.
- Let the Ghost Remover dry and crystallize on the screen. On polyester mesh Ghost Remover can be safely left on the screen for several hours or overnight.
- Rewet Ghost Remover with Ghost Remover Activator. Before the Ghost Remover is washed off the screen, brush Ghost Remover Activator on top of the dried Ghost Remover on both sides of the screen.
- Let the mixture react for a few minutes. Rinse thoroughly with water. Follow up with pressurized water if needed.

HEALTH AND SAFETY INFORMATION: Ghost Remover Activator is for industrial use only and should be used in a well-ventilated area. Wear protective rubber gloves, goggles and a rubber apron during use. Avoid eye and skin contact.

Ghost Remover Activator can be eliminated through biological decomposition in sewage plants. With appropriate treatment no disturbances of the activated sludge is to be expected. Production wastewaters cannot be dumped into open water systems without prior pre-treatment.

PACKAGING: 1 quart=946 ml 1 gallon=3.785 liters
